

ABDERRAHMEN BCHINI

abderrahmenbchini.com | abderrahmen.bchini24@gmail.com | +216 57 127 140

Summary

I'm a software engineering graduate that's interested in cybersecurity and looking for an internship

Experience

WIFAK

Intern

02/2026 - 06/2026

- Designed and developed a Retrieval-Augmented Generation (RAG) system powered by an AI model to assist bank employees in quickly accessing internal procedures and operational information.
- Implemented document preprocessing, including text chunking and splitting, to optimize information retrieval and response accuracy.
- Integrated a local vector database using Qdrant to store and retrieve document embeddings efficiently.
- Improved employees' productivity by reducing the time spent searching for procedures, policies, and internal documentation.

Tunis Bio Labs

Web Developer

06/2025 - 07/2025

- Developed an interactive dashboard web application with filtering options enabling users to track and analyze nationwide data efficiently.
- Implemented dynamic data filtering and visualization features, improving decision-making.
- Designed and built the dashboard frontend with HTML, CSS, and JavaScript, and connected it to backend data sources for accurate reporting.
- Collaborated with stakeholders to define requirements and ensured the dashboard met business needs for data monitoring and reporting.

Pratik.tn

Programming Instructor

2023 - 2024

- Delivered live online sessions for high school (BAC) students.
- Designed and published custom revision exercises.
- Recorded video walkthroughs of past BAC exam questions and solutions.
- Provided Q&A support to over 300 students through the platform.
- Contributed to a 99%+ pass rate and received consistently high student satisfaction ratings.

Projects

Student Quiz Platform

- Built a web-based quiz platform with user authentication, category selection, and timed quizzes using HTML, CSS, JavaScript, PHP, and MySQL.
- Applied server-side input sanitization against SQL injection and password hashing for secure authentication.

Operating System Configuration & Automation

- Configured a minimal Arch Linux environment from scratch — bootloader, system services, networking, and hardware drivers with no guided installers.
- Wrote Bash scripts to automate environment setup, theme switching, package management, and battery monitoring.

Raspberry Pi Network Ad Blocker & VPN

- Deployed Pi-hole on a Raspberry Pi Zero 2 W as a network-wide DNS-based ad and tracker blocker with custom blocklists and DNS query monitoring.
- Extended off-network coverage by integrating Tailscale VPN; administered the device remotely over SSH.

Self-Hosted Cloud Server

- Repurposed legacy hardware into a Nextcloud instance with Apache, MariaDB, and DuckDNS for self-hosted file storage and remote sync.
- Hardened the setup with least-privilege database access and safe startup/shutdown scripting to prevent data corruption.

Self-Hosted Media Streaming Server

- Deployed Jellyfin using Docker Compose with persistent storage volumes, container networking, and automated service management.
- Secured remote access via reverse proxy and DuckDNS with isolated container networking and minimal exposed ports.

Skills

Technical Skills: Networking | Cybersecurity Analysis | Operating Systems | Cloud services | Programing & Scripting | Hardware & IT

Soft Skills: Project Management | Effective Communication | Teamwork | Problem Solving | Adaptability

Certificates

Cisco Networking Academy : Cybersecurity Essentials — Cisco Network Academy
Writing Skills For Engineering Leaders — Rice University (Coursera)

Education

MUST University	Le Kram, Tunisia
Bachelor's Degree in Software Engineering	2023 - 2026
Lycee Hrairia 2	Tunis, Tunisia
Baccaléauréat in Mathematics	2023

Languages

English	Arabic	French
